Cadence Web Access

Offers Axis Global Customers Powerful Order Entry and Information Retrieval System

Cadence Web Access – a powerful, browser-based order entry and information retrieval system that connects directly to Axis' Cadence Fulfillment System and the Axis Trak Transportation Management System – is now available to customers of Axis Global Logistics.

This powerful tool gives Axis customers access to Cadence Warehouse and Order Management Systems via the Internet and allows them to search product catalogs, build and place orders, check order status, locate inventory, track the status of shipments and verify delivery information.

Cadence Web Access organizes customer-specific product catalogs that let users search for and select products and add them to shopping carts to build orders and quotations. The system also provides catalog searching, product images (photos, thumbnails, and illustrations), style sheets, detailed product information (availability, unit of measure, color, style, etc.) and manages allocations and distribution lists.

Internet access to a powerful central warehouse and order management system improves information, performance and service. *Cadence Web Access* is an extension of Axis Global Logistics' unique warehouse-centric Cadence Fulfillment System, which operates multiple logistics operations, eliminating the need for expensive and cumbersome interfaces between different systems. The Cadence System operates on a Microsoft SQL Server database that maintains information about products, customers, orders, vendors, and shipments.

Cadence Web Access allows your virtual warehouse to deliver a whole new level of service. Customer information, security and associated catalog information are rules-based and can be individualized for each client, customer or groups of customers. *Cadence Web Access* is highly configurable to allow variable design themes and order rules for different clients and customers. The system also lets users send orders to multiple accounts on user-defined distribution lists of ship-to addresses and manage order templates for recurring orders.

Cadence Web Access Benefits:

Secure User Login provides access to specific ship-to addresses, customer catalog, order processing rules, and other account-based rules/information;

Customized Design for Each Customer Login can also load customized web page design, which can be different for each customer/customer group;
